Profile

I am currently working at Nini Magazine (NiniPlus) as a senior iOS developer and software project manager. We have created a new app for the community of pregnant women where I have built its iOS application, the real-time architecture of the software, associated web application backends, monitoring services and the RESTful and socket-based API. Moreover, I have done some tasks in IT human resource management there.

On the other hand, backend development of mobile applications is one of my forte due to the fact that I have worked and developed web applications with some PHP frameworks like CodeIgniter, MySQL and mongoDB for more than 5 years.

In terms of educational background, I have studied about 8 years in different fields of computer engineering, doing some applied researches on information technology, specially pattern recognition in social networks.
